

Executive Update

This V153 report replaces the prior V134-labelled report asset and records the changes completed through the latest packaging pass. The content-quality baseline remains the V117 zero-flag audit; V153 is the presentation, report, timeline, landing-seal and deployment-alignment update.

QUESTION BANK 2,000 25 sets x 80 questions, including Hard Sets 1-5.	AUDIT FLAGS 0 Critical, high, medium and low issue categories closed.	TRUST SCORE 9.4/10 Content baseline retained from Round 18.	PACKAGE V153 Minimum GitHub/Vercel package rebuilt.
---	--	--	--

- + Report page now points to IPPC_Question_Bank_Audit_Report_V153.pdf and uses V153 titles.
- + Audit website labels and timeline copy are updated from V134/V151 to V153.
- + Timeline desktop UI was repaired: no clipped active card, no right-edge rail mask, no visible rail scrollbar.
- + Dusk/dawn curtain transition is retained through the book curtain overlay and curtain theme buttons.
- + Main landing Interface Edition seal has been realigned and updated to Volume 153.

Version Scope

The V153 scope is deliberately split between content assurance and interface/deployment polish. The question-bank audit result does not claim a new legal-proofreading round beyond the closed V117 baseline; it records that the application wrapper, audit website, report asset and packaging have been brought forward to V153.

- + V117: full content-quality audit baseline, all automated severity buckets closed.
- + V134: prior report and formatted app baseline.
- + V151-V152: audit website packaging and timeline alignment work.
- + V153: report regenerated, audit website text updated, timeline format issue corrected, landing seal repaired, Vercel/GitHub minimum zip rebuilt.

Interpretation: V153 is the current deployable presentation baseline. The underlying 2,000-question bank remains the same audited bank unless a future content-editing round is requested.

Question Bank Baseline

SETS 25 Each set contains 80 questions.	TOTAL QUESTIONS 2,000 Full mock-bank scope.	ANSWER BALANCE 500x4 A/B/C/D balanced across bank.	CLO SPLIT 15/45/40 Generated-paper target mix.
--	--	---	---

- + The mock system remains aligned around 80-question generated papers.
- + Hard Sets 1-5 remain part of the bank and navigation.
- + Flashcards remain available for legal anchors, dates, penalties and product rules.
- + Detailed progress history remains local to the user's device and preserves attempt breakdowns.

Audit Website Update

The Colophon/Audit Website is now labelled as a V1 to V153 retrospective. Runtime text replacement remains in place to prevent older V134/V151 labels from reappearing after the static bundle hydrates.

- + Document title and meta description now say V1 to V153.
- + Hero, overview, timeline and footer text are normalized to V153 where they referred to the prior latest baseline.
- + The latest timeline range is shown as V124-V153.
- + The Back to Main Menu affordance remains intact.

Timeline UI Finding and Fix

The attached screenshot showed the active timeline card beginning too close to its left edge, with date/title text appearing clipped. The left progress rail also showed a visible scrollbar and a dark right-edge mask.

- + Main desktop timeline grid now has stable columns, wider column gap and safe horizontal padding.
- + The active article card receives explicit inner padding, box sizing and a constrained max width.
- + The old right-edge rail mask is disabled.
- + Rail overflow is forcibly hidden and scrollbars are removed from the rail/scroller nodes.
- + Focus styling was adjusted so selected timeline buttons no longer produce a full rectangular outline during mouse selection.

Landing Interface Edition Seal

The landing seal had an overlap between the circular ring text and the central 'Interface Edition' label. V153 adjusts the seal as a compact typographic mark instead of allowing the mono label to sprawl into the ring.

- + Ring text now says Volume One Hundred & Fifty-Three.
- + The central V153 is centered with a tighter line height.
- + The Interface Edition label is constrained, centered and set with lower letter spacing.
- + The outer ring typography is slightly reduced so it reads as ornament instead of colliding with the center.
- + Mobile keeps the ring hidden and uses a smaller central label.

Dusk and Dawn Curtain

The theme-switching curtain remains part of the V153 application. The book landing uses a book-curtain-overlay during the dusk/dawn switch; portal pages use the shared CurtainThemeButton component.

- + BookThemeToggle drives falling and rising phases around the theme change.
- + CSS for book-curtain-overlay.falling and book-curtain-overlay.rising is present.
- + Report, printable notes and settings drawers use CurtainThemeButton for consistent transition behavior.
- + The transition remains transform-based for smooth rendering.

Report Asset Update

The V153 report is now a regenerated PDF asset rather than only a renamed V134 file. The app iframe references the V153 PDF path and this document's PDF metadata title is set to IPPC Question Bank Audit Report - V153.

- + Public asset: public/IPPC_Question_Bank_Audit_Report_V153.pdf.
- + Application constant: REPORT_PDF_PATH points to the V153 asset.
- + Iframe title: IPPC V153 Audit Report.
- + Report portal header: V153 Audit Report.
- + The previous V134 PDF remains in public as a historical asset unless removed in a later cleanup.

Deployment Package Rules

The package remains suitable for both GitHub and Vercel as a source package. Vercel should install dependencies and rebuild dist itself.

- + Include: index.html, package.json, package-lock.json, vercel.json, src/ and public/.
- + Exclude: node_modules/ and dist/.
- + Keep public/about/assets with the audit website bundle.
- + Keep public/questions.packed.json and public/questions.packed.json.gz for the question bank.
- + Keep the V153 PDF report asset in public/.

Verification Summary

The following verification activities were completed during the V153 update cycle.

- + Production build passed with Vite.
- + Audit timeline V53 card was checked locally at desktop viewport size and no longer clips at the left edge.
- + Timeline rail no longer shows the earlier scrollbar/dark-mask artifact.
- + V153 report metadata and app references were checked.
- + Minimum zip contents were checked for required source files and absence of node_modules/dist.

Residual caveat: this report records UI, packaging and presentation changes through V153. A separate legal proofreading pass would be required before claiming a new substantive legal-content audit beyond the V117 zero-flag baseline.
