Analytical Report

V79 Presentation Style - restored slide-style layout with updated V78/V79 QA status

1,600

Questions

20 mock sets x 80 MCQs

400 each

Answer key

A/B/C/D exactly balanced

200

Calculations

Formula helpers present

0

QA exceptions

Duplicates/options/STR/PIDM severe flags

Report purpose

This report restores the earlier presentation-style format: landscape pages, larger charts, clear scorecards, and lower visual clutter. It reflects the latest question bank after the V78 super-QA pass plus a small V79 option-polish patch that removed duplicate/malformed options in 9 records.

No severe audit flags

What changed vs the compressed V78 report

- Restored landscape presentation format with one major idea per page.
- Expanded charts and scorecards so labels do not overlap or crowd each other.
- Added a transparent V79 note for the 9 option-format records patched during report rebuild.

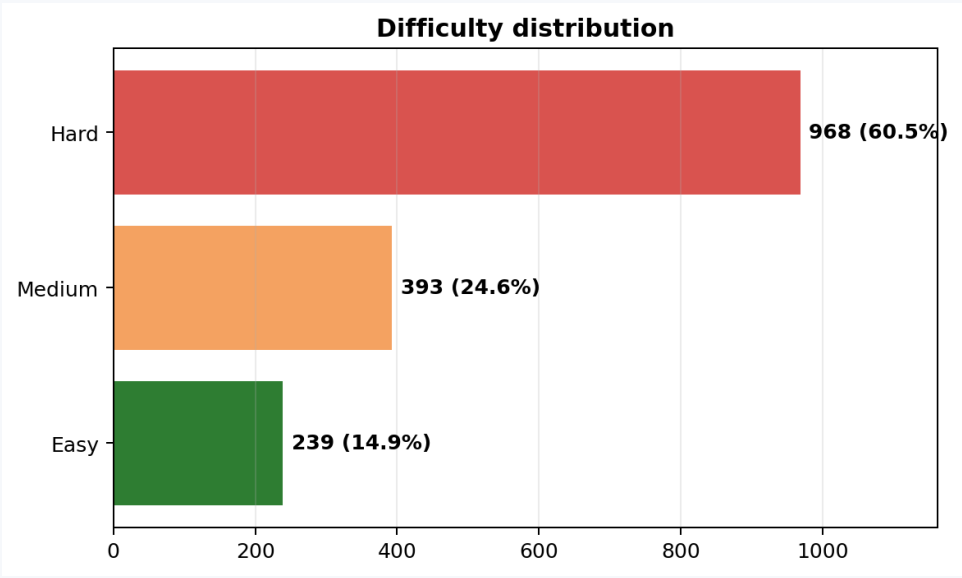

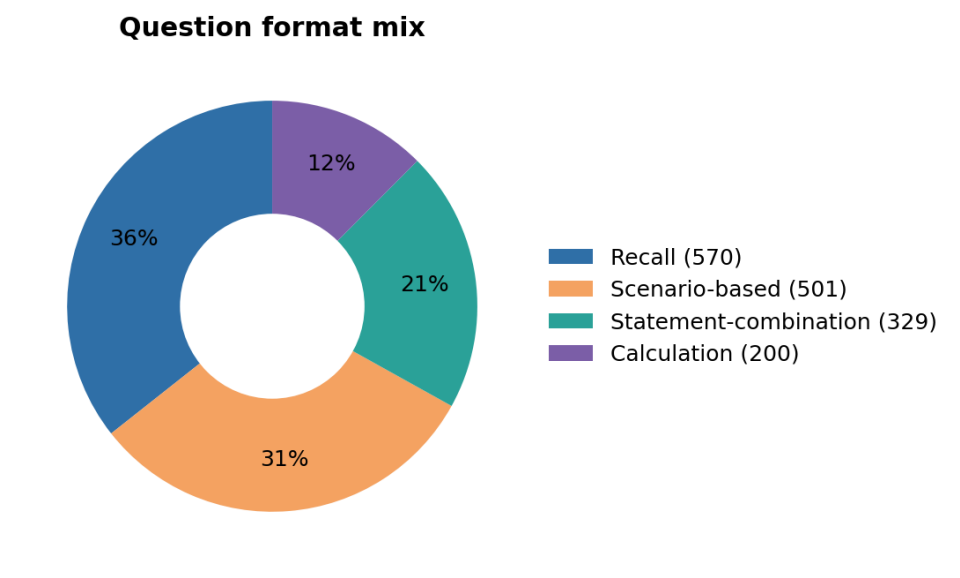

CLO coverage: actual vs target weighting

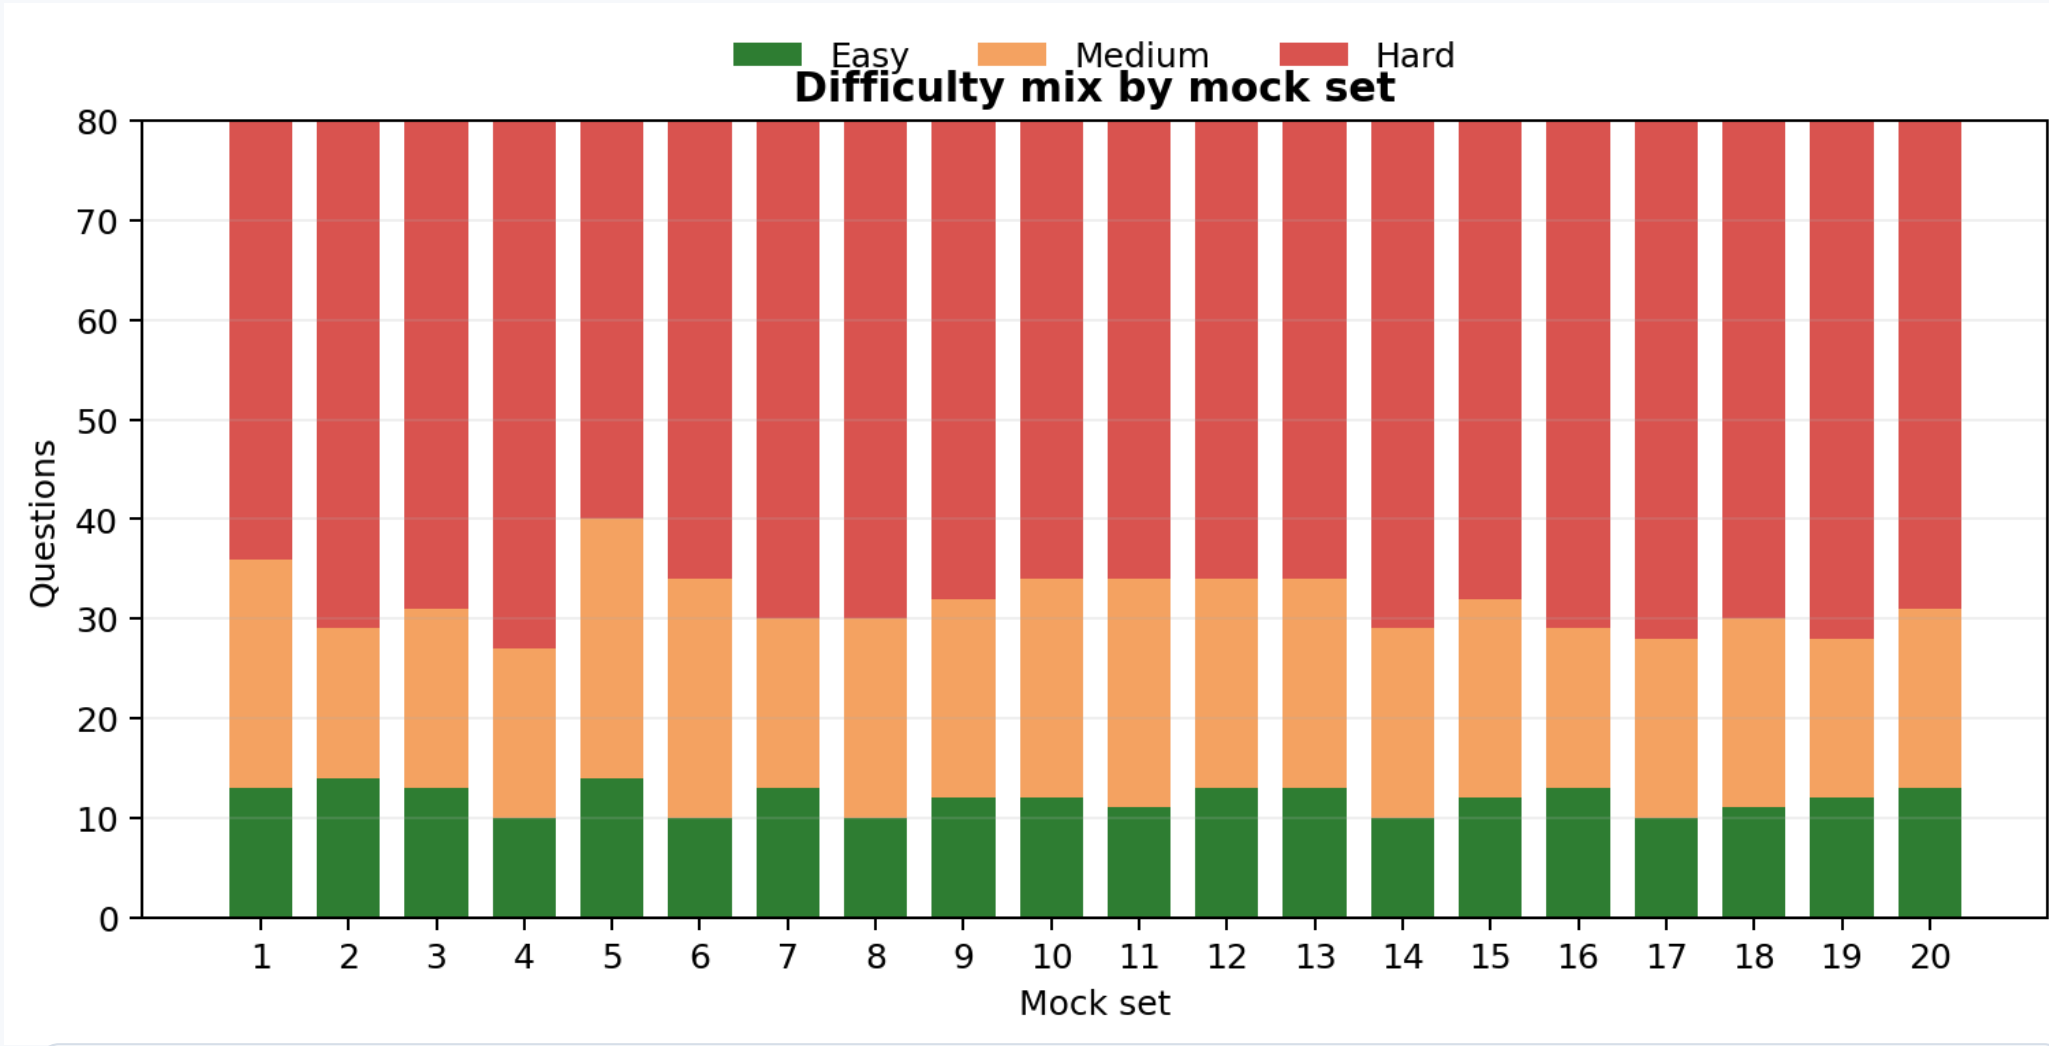

Interpretation

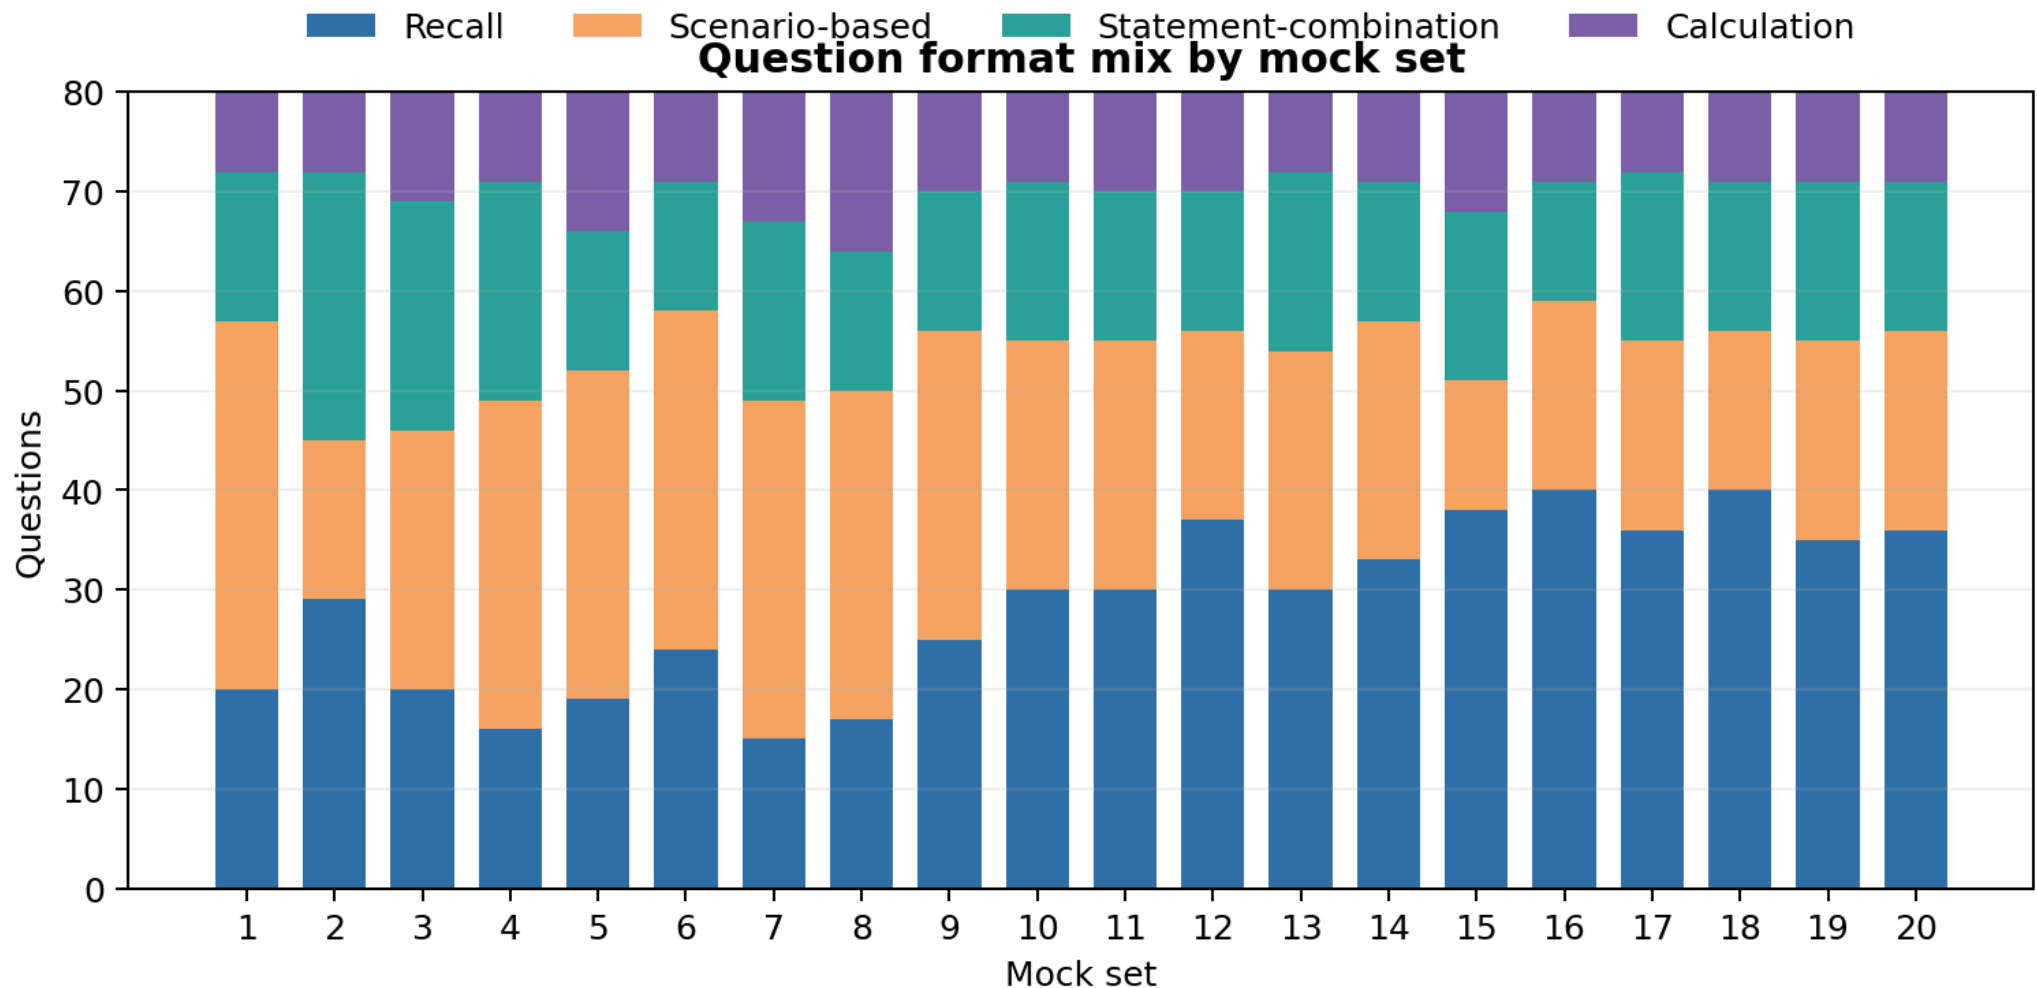

- CLO1 actual: 15.7% vs 15% target - broadly aligned.
- CLO2 actual: 46.6% vs 45% target - slightly overweight, acceptable for regulation-heavy revision.
- CLO3 actual: 37.8% vs 40% target - slightly under target but still the largest product/calculation block.
- No CLO is missing from any mock set.

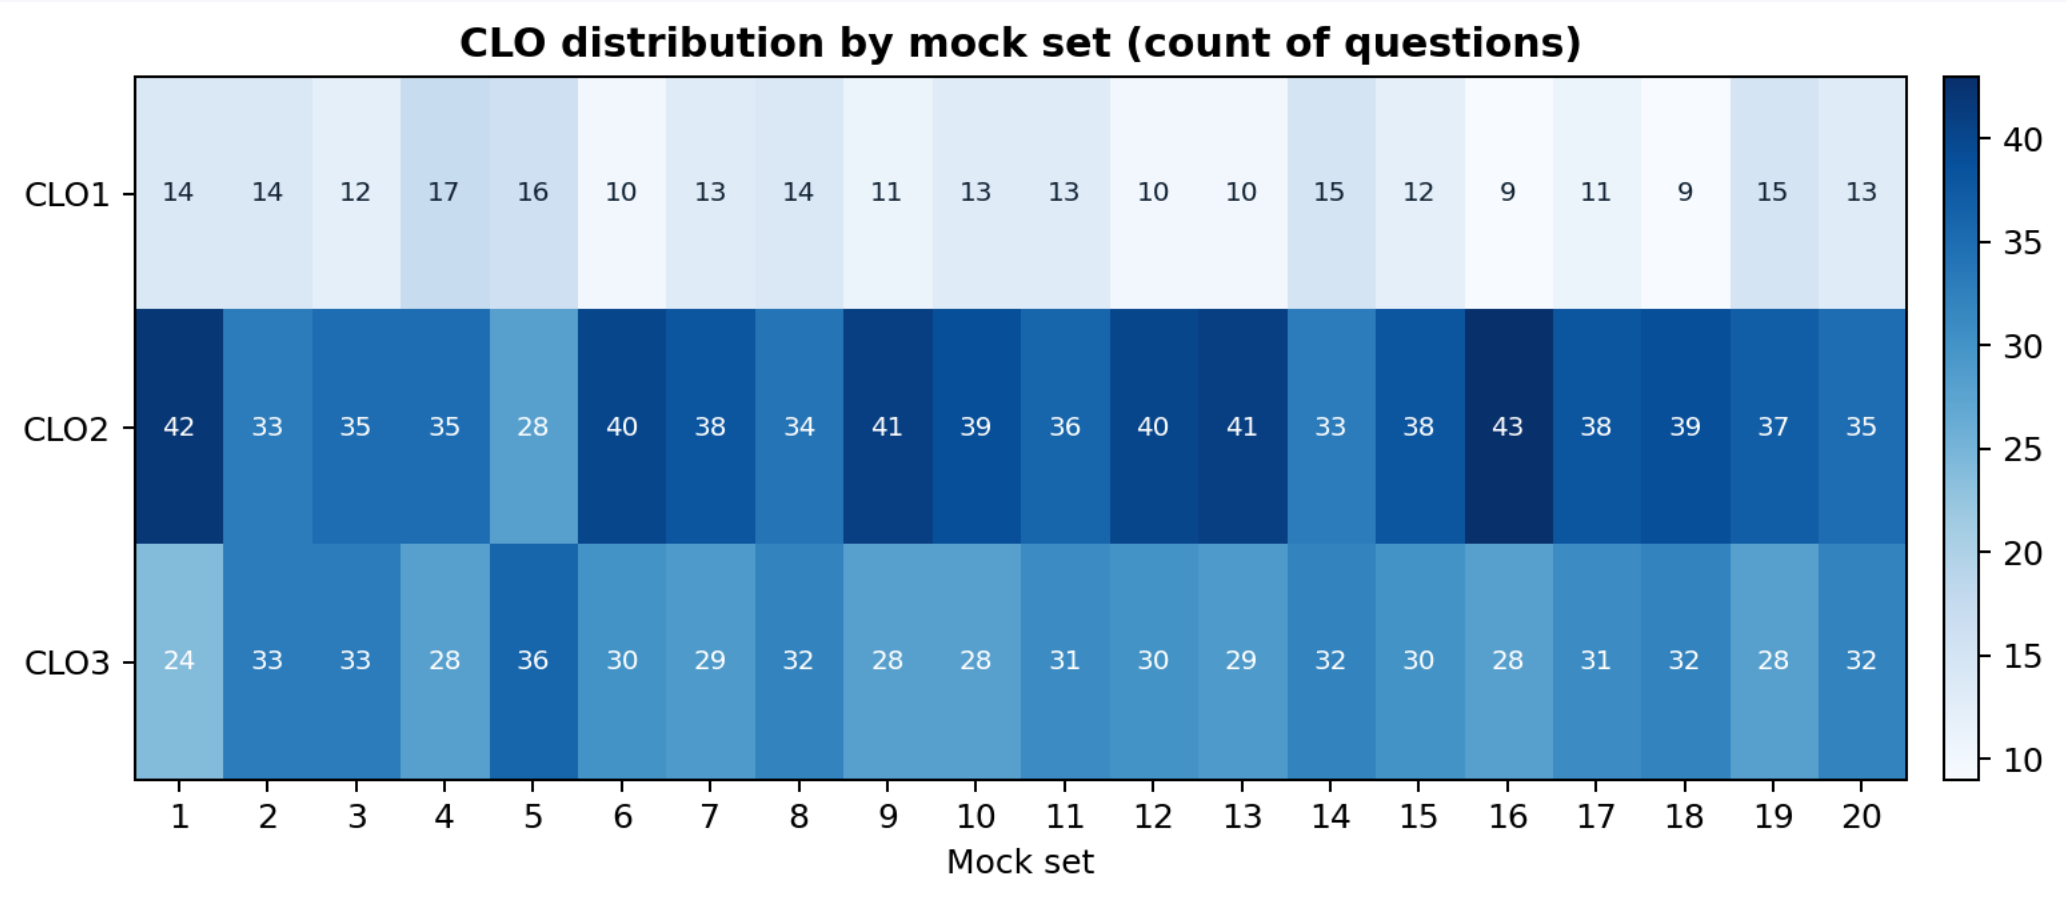

Design note: The bank remains intentionally mixed - recall, scenario, statement-combination and calculation items are all represented. The high hard-question share reflects the user-requested exam-strengthening and QA passes.

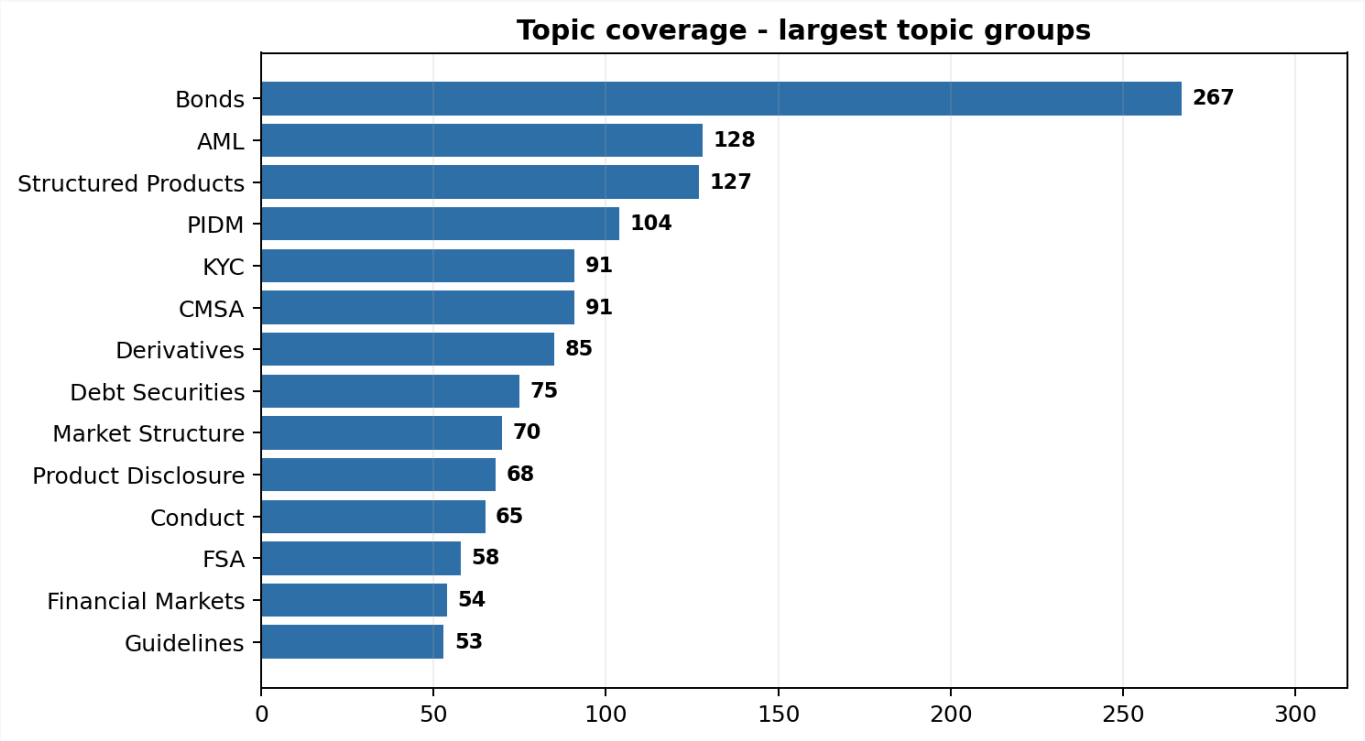

All 20 sets remain at 80 questions. The mix is deliberately more demanding than a basic recall-only paper, with medium and hard questions spread across the bank rather than concentrated in a few sets.

Calculations, statement-combination items, scenario-based items and recall items are distributed across sets to reduce predictability and avoid repetitive exam feel.

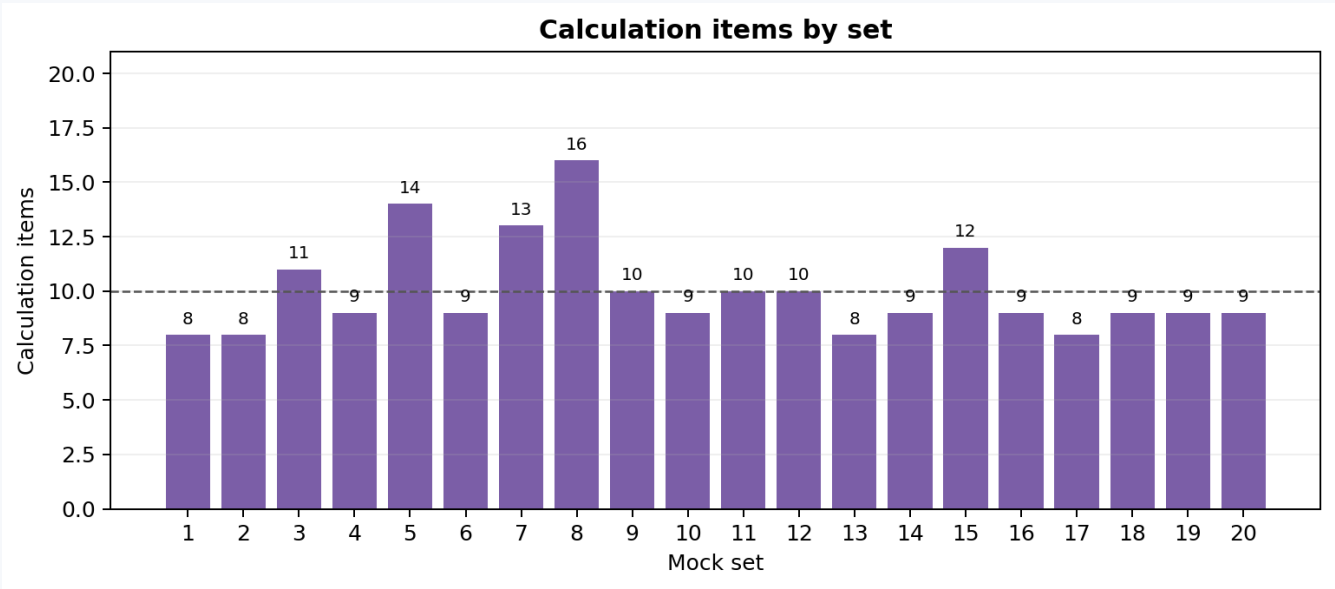

Each set contains a practical combination of Malaysian financial system, regulatory/guideline, and debt/structured-product questions. This keeps each mock representative rather than topic-skewed.

Largest areas

Topic	Q	%
Bonds	267	16.7%
AML	128	8.0%
Structured Products	127	7.9%
PIDM	104	6.5%
KYC	91	5.7%
CMSA	91	5.7%
Derivatives	85	5.3%
Debt Securities	75	4.7%

Coverage remains regulation-heavy by design, but CLO3 product and bond topics are still strongly represented through bonds, structured products, derivatives and debt securities.

200

Calculation questions

Target maintained

200

Formula helper fields

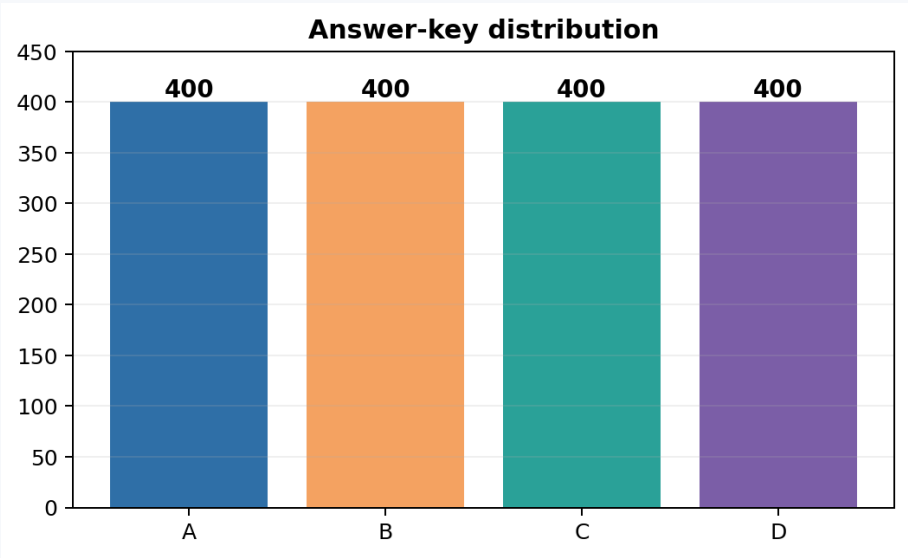

All calculation records include helper field

0

Generic calculation flags

No weak generic calculation prompts remain

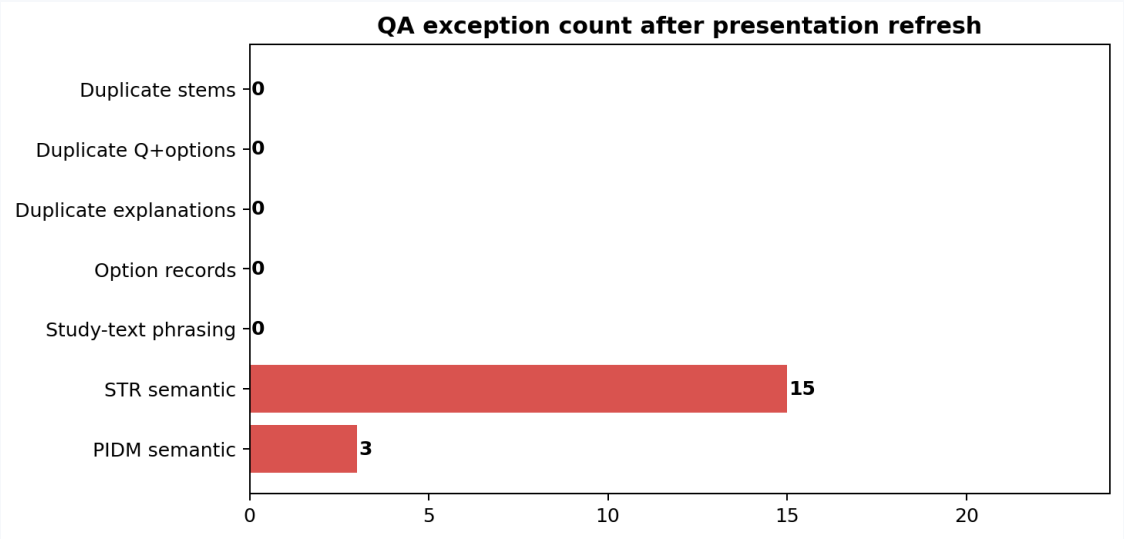

Calculation items remain concentrated in bond/debt/structured-product applications, including yield, price, current yield, discount return, duration and structured-product payoff mechanics.

Option-quality checks

Check	Result	Status
A/B/C/D distribution	400 / 400 / 400 / 400	Pass
Duplicate/malformed options	0	Pass
Duplicate stems	0	Pass
Duplicate Q + options	0	Pass
Duplicate explanations	0	Pass
Material answer-length bias	0	Pass

V79 note: while restoring the presentation-style report, 9 duplicate/malformed option records surfaced from the V78 bank and were corrected. The answer letters were preserved, so the exact 400/400/400/400 distribution remains intact.

High-risk areas rechecked

- STR questions: remain suspicion-based, not threshold-based, and avoid customer notification / tipping-off wording.
- PIDM questions: severe foreign-currency deposit error pattern checked and not detected.
- Study Text / textbook-style phrasing: no severe residual flags from the targeted cleanup list.
- Roman numeral display: no known missing-statement patch issue from the latest bank.

What to use now

- Use the V79 GitHub/Vercel ZIP for deployment.
- The embedded report is presentation style again.
- The question bank includes the V78 QA base plus V79 option polish.

Final checks

Metric	Result
Questions	1600
Mock sets	20 x 80
A/B/C/D	400 each
Calculations	200
Gzip matches JSON	Yes

Verdict: the report has been restored to the previous presentation-style format while reflecting the latest QA status. The app package is ready to replace the current GitHub/Vercel source files without changing the repository itself.
